

Data & Baseline Calibration (2010–2022)

Task Exposure Calibration

- O*NET (tasks/weights)
- BLS OEWS (employment)
- IPEDS (education data)

Physical Protection (P_i)

Work context: Physical share (%)
Output: P_i

Composite Exposure (X_i)

AI capability \times task weight
Window: 2010–2022

Baseline Calibration Output

Calibrated params: $\kappa_E, \delta_0, \varepsilon_D$
Baseline profile

Dynamic Core (TECM + VBC + Demand)

Adoption & Congestion

State: $A(t), \rho_v(t)$

ΔN

Verification Bottleneck

Adoption \rightarrow Verification
load \rightarrow Congestion

Employment Evolution

State: $E(t)$

Augmentation vs. Displacement

$\Delta\phi$

Market Feedback

Demand-side response

ΔC_v

Market Demand (Jevons effect)

Demand offset
Rebound

Policy & Adaptive Recommendations

Scenario Assumptions (2023+)

$\{\kappa_A, A_{cap}, s_{base}, \dots\}$

Policy Levers

Enrollment size N
Curriculum intensity ϕ
Verification capacity $C_v(t)$

Decision Outputs (Thresholds)

Tipping point A^*
Stress-test bands for $E(t)$

Uncertainty & Stress Test

PRCC sensitivity
Forecast bands

Simulated Outcomes

Recommended $\Delta N, \Delta\phi$
Projected $E(t)$ bands

Solid dark arrows: causal flow

Orange dashed arrows: policy feedback
